

— BONUS · THE AUTOMATION LAB · PRACTISE ON A REAL SYSTEM

The Automation Lab.

A working ERP · Four scenarios · Scored runs · A verifiable certificate

• 2 HOURS • BONUS MODULE • BRING A BOT • OPEN ALL YEAR

– BONUS / CONTENTS

What we'll cover.

-
- 01 **What the lab is** — a working system, not a practice form.
 - 02 **Al-Nahda** — the company, and the paper trail it leaves behind.
 - 03 **The document ladder** — the same invoice, five times harder.
 - 04 **The four scenarios** — what each one actually asks of you.
 - 05 **How a run is scored** — five parameters, published up front.
 - 06 **Sign up live** — open a run together, then your task.
-

– 01 / EXPECTED TO LEARN

By the end of today, you can —

-
- 01 Say why a **demo sandbox teaches nothing** — and what a real system adds.
 - 02 Work a scenario **end to end** — through the screens or the API, your choice.
 - 03 Read a **score breakdown** and name the parameter you would attack next.
 - 04 Point a bot at the API with **its own credential** — no browser involved.
-

– 02 / WHAT IT IS

– A PRACTICE FORM

Four rows and a submit

Data invented for the exercise

Every field already clean

Nothing references anything else

Break it and nobody notices

You finish, and learn the form

– THE AUTOMATION LAB

A company with a history

Two years of purchasing behind it

Documents that argue with each other

Orders, receipts and invoices that must agree

Break the chain and it tells you

You finish, and learn the process

- YOU ARE GIVEN A LOGIN, NOT A TUTORIAL

– 02.1 / THREE WAYS IN

Screens for people. API for bots. Paper for both.

SCREENS

Click it through

queues · forms · decisions

API

Drive it headless

REST · tokens · work items

DOCUMENTS

Read the paper

PDF · five levels · Arabic

The scoring is the same either way – the lab does not care whether a human or a robot did the work.

– 03 / THE PROBLEM

Clean data teaches you nothing.

- A tutorial invoice has every field where you expect it, spelled the way you expect.
- Production has a **photograph of a creased page**, in Arabic, with the total handwritten.
- A bot that only ever met the first one fails on its first real day.

— 04 / THE PAPER TRAIL

Every document points at another one.

- 01 **Request for quotation** — you ask several suppliers, they answer with prices that expire.
- 02 **Purchase order** — you award one; everything later is measured against it.
- 03 **Delivery note, goods receipt** — what arrived, and what you admit arrived.
- 04 **Invoice, payment** — the supplier's claim, matched three ways before a riyal moves.

— 04.1 / THE DOCUMENT LADDER

The same invoice, five times harder.

- | | |
|----|---|
| 01 | Digital print — born a PDF, text you can select. |
| 02 | Clean scan — 300 dpi, straight, a little soft. |
| 03 | Office scan — skewed, speckled, a fold down the middle. |
| 04 | Phone photo — shadow across the page, taken at a door. |
| 05 | Bad phone photo — creased, dim, Arabic. Where readers break. |

– 05 / THE FOUR SCENARIOS

Pick the one that worries you.

- | | |
|----|--|
| 01 | Invoice processing — 12 invoices. Read, match against order and receipt, decide. |
| 02 | Supplier onboarding — 10 applications. Check the licence and tax card, then decide. |
| 03 | Goods receipt — 8 deliveries. Post what arrived; refuse what should not be. |
| 04 | Award the quotation — 6 requests. Compare, award the right one, raise the order. |

– 05.1 / HOW A RUN IS SCORED

Five parameters, published before you start.

- | | |
|----|---|
| 01 | Accuracy — every field against what the document says. |
| 02 | Decisions — approve, reject, refuse, against the rules. |
| 03 | Exceptions — defects caught, minus the ones invented. |
| 04 | Coverage — how much you finished before the clock stopped. |
| 05 | Time — wall clock against a competent baseline. |

– 05.2 / TWO MODES

– PRACTICE

Tells you as you go

One item at a time, as often as you like
The match result is shown as you work
Wrong answers explained on the spot
Kept in your history, off the board
This is where you learn

– SCORED

Tells you at the end

The whole set, one run at a time
Feedback is switched off while the clock runs
Marking arrives when you finish
Sixty or better earns a certificate
This is where you find out

- PRACTISE UNTIL IT IS BORING, THEN GO SCORED

— 06 / JUDGMENT

What the score measures — and what it doesn't.

- ✓ Whether your bot read the page correctly and then did the right thing about it.
- ✗ How clever the code is. Share it freely — the lab scores the work, not the author.
- ✗ How fast you type. Time is five points in a hundred — the smallest of the five, on purpose.

Copy any code you like. You still have to read the page.

■ LIVE · TOGETHER

What we'll do right now.

- ① Sign up. Your workspace opens immediately — there is nothing to provision.
- ② Open a practice run on goods receipt — one delivery, with the match result showing.
- ③ Mint an API token and post the same receipt again with a single HTTP call.
- ④ Refuse an over-delivery on purpose, and watch the lab agree with you.

– 07 / YOUR TASK

Earn a certificate.

DO

Practise invoice processing until the match result holds no surprises.

Move to level 3 and practise again — the reading is the hard part.

Take one scored run. Finish it, whatever the number says.

Read the breakdown and write down which parameter cost you most.

DELIVER – BEFORE THE NEXT SESSION

Your certificate code, or your score if you did not pass.

The parameter that cost you most, and what you would change.

One sentence: which of the four scenarios is closest to your day job, and why.

– 07.1 / INTERVIEW SEED

If they ask: “Have you automated anything end to end?”

- 1 **Name the process** — not the tool. Three-way match, supplier onboarding, goods receipt.
- 2 **Name the hard part** — reading a creased photograph, not clicking a button.
- 3 **Name the number** — a score, on a published rubric, that somebody else can verify.
- 4 **Name what you would do next** — the parameter you lost. That is the interview.

- A CODE THEY CAN CHECK BEATS A SENTENCE THEY CANNOT

– 08 / RECAP

A real system, a fixed rubric, a number you can defend.

- ✓ Why clean tutorial data is the worst possible preparation.
- ✓ Five levels of the same page, and where your reader breaks.
- ✓ A scored run, a breakdown, and a certificate with a public code.

– 08.1 / WHAT'S MISSING

It scores you. It doesn't teach you.

The lab tells you how many fields your reader missed and how many decisions disagreed with the rules. It does not tell you why, or what to try instead. Bring your breakdown to the next session.

– 09 / NEXT

Bring me a number.

NEXT → Your scored run – whatever it says

the breakdown · the parameter that hurt · one change you would make
